DETAILED ACTION

Allowable Subject Matter

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art does not teach in combination with the other limitation of the independent claim a gap defined between a pump housing and a protective ring for receiving a pump tubing from outside, wherein the gap is open at an outer periphery of the gap during operation of the pump.

The closest prior art of record, Fulmer discloses a medical tubing pump comprising a pump wheel (40, 52, 50,48, 44 and 45) having a circumference and a front side perpendicular to the wheel axis, two tubing insertion locations (20, 22) for insertion of a pump tubing such that the tubing wraps around the pump wheel (Figure 3)), and a stationary protective ring (34, figure 3) surrounding the entire circumference of the pump wheel (Figure 3) at the front side of the wheel for covering the inserted pump tubing; wherein the protective ring (34) directly borders the pump wheel (Figure 3) without contact over the entire circumference of the wheel; wherein the protective ring (34) extends essentially flush to the front side of the pump wheel (Figure 2); wherein the protective ring comprises a front plate which covers the front side of the pump wheel (upper part of 34, figure 2)) and extends radially outwardly beyond the circumference of the pump wheel (lower part of 34, figure 2); wherein the protective ring (34) forms a sub-assembly with the tube insertion locations (20, 22); wherein the protective ring (34) is formed as one piece with the tubing insertion locations (20, 22); wherein the one piece is made of plastic (Figure 3); wherein the protective ring (34) is part of a cage (part of 34

that goes around) surrounding the pump wheel (40, 52, 50, 48, 44 and 45) as shown in figure 2); wherein the cage comprises a rear ring (ring structure shown in figure 2 that is part of the housing 34) which circumferentially surrounds the pump wheel and bears on a front plate (Figure 2, the plate that extends from the housing) of a pump housing, and wherein the rear ring is spaced from the protective ring by an amount at least equal to a diameter of the pump tubing to be inserted (figure 2 and 3); wherein the spacing between the protective ring (front of 34) and the rear ring (ring structure shown in figure 2 that is part of the housing 34) forms a gap (38) for accommodating the pump tubing (32), wherein the gap (38) extends along a section of the wheel circumference and the gap is continuous in a radial direction of the rings from the wheel circumference to outside the cage; wherein the protective ring has a radial extension which is at least equal to a diameter of the pump tubing (Figure 2 and 3). A pump with a replaceable pump head is disclosed. Fulmer does not disclose a gap defined between a pump housing and a protective ring for receiving a pump tubing from outside, wherein the gap is open at an outer periphery of the gap during operation of the pump.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
